

Calibration Target

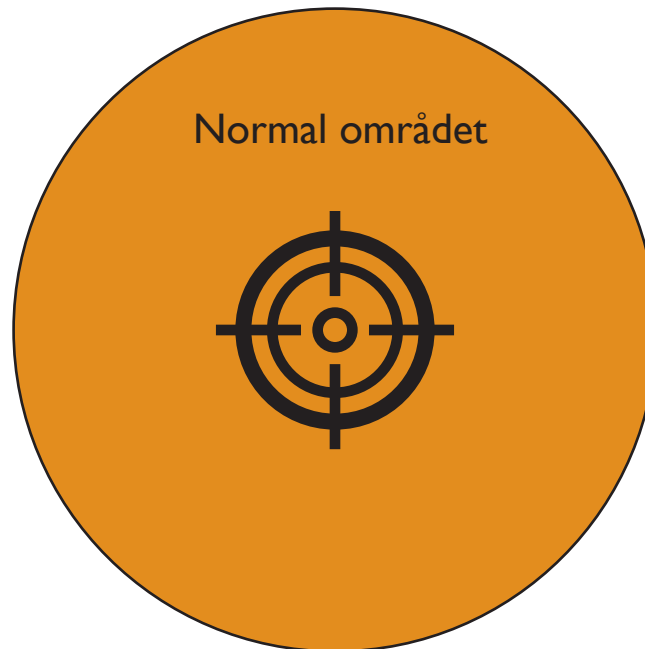

Used to check if your weapon is right for you, and whether you mount your shotgun the same every time

Attach this print to e.g. a cardboard box and stand app. 4 meters from it.

Mount your Training Cartridge from B4HUNT in your shotgun.

Focus on the intersection, mount the shotgun (without aiming) and shoot 20 to 30 times on the shooting target.

Too straight

Cast of

Interpretation of the result

If 80% of the balls are in the orange field, your shotgun will fit you well enough and you mount your shotgun reasonably the same every time.

If bullets sit all over the dial, it's because you don't mount your shotgun the same way every time. Training of shotgun assembly is necessary

If the majority of the bullets hit near or directly to one of the texts, there is reason to suspect that you should be able to customize your handle with the text you hit.

If you primarily hit cast on, then you must have done some cast on on your butt (bent butt) at the gunsmith. Please bring this target to your gunsmith.

Cast on

Too curvy

For use with B4HUNT Training Cartridges only
